

Thinking too much about my config

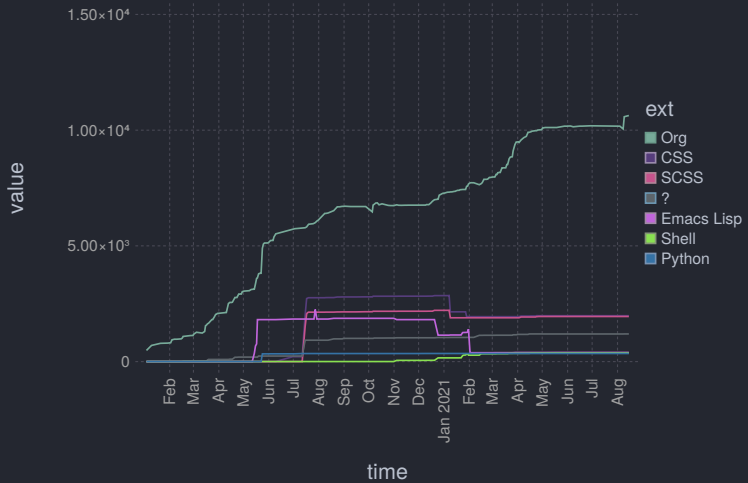

DoomConf 2021

TEC

2021-08-15

Development

Growth by filetype

Proportional change in the Org file

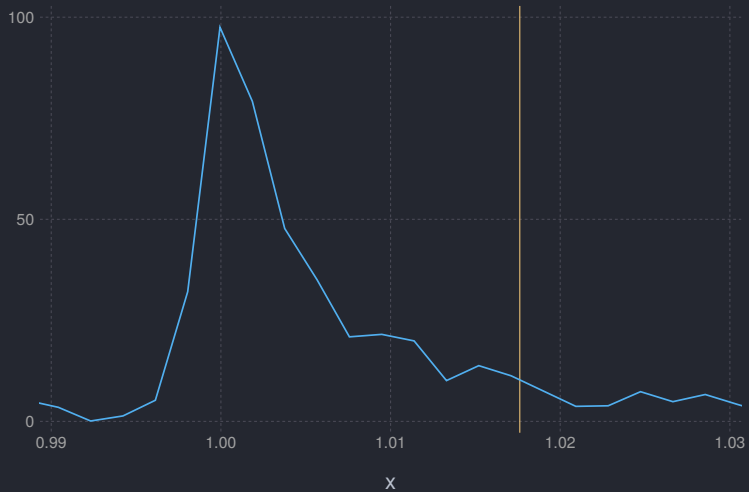

When do I config the most in the week?

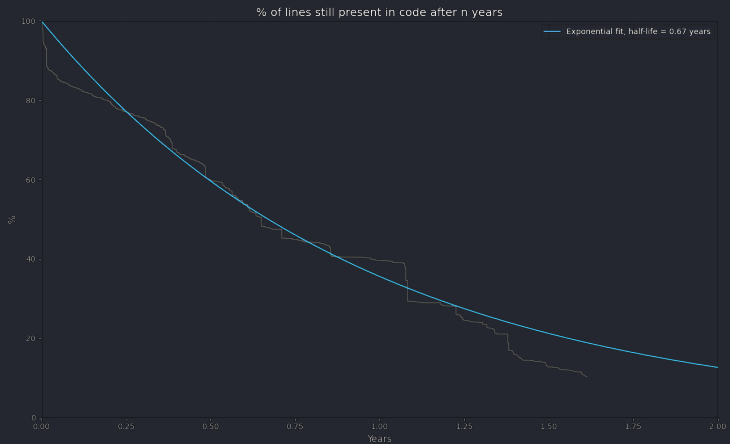

Proportional change in the Org file — 2

Zooming in

Code churn

Literacy

Copy my repo to a temp folder

```
git clone https://github.com/tecosaur/emacs-config.git  
↪ /tmp/doom-conf
```

Get a list of all the comments

```
commits, timestamps =  
    @. reverse(split(read([`git log  
        ↪ --format=format:"%H" `  
                                `git log --format='%ad'  
                                ↪ --date=format:'%Y-%m-  
                                ↪ %dT%H:%M:%S'`], String),  
                                ↪ '\n'))  
timestamps = DateTime.(timestamps)
```

Get the `.org` and `.el` lengths

```
function organdelloc(hash)
  run(`git reset --hard $hash`)
  e = execute(`emacs --batch --eval "(progn (require
    ↳ 'org) (setq org-confirm-babel-evaluate nil)
    ↳ (org-babel-tangle-file \"config.org\"))"`)
  run(`sed -i '/;; \[\\[file/d' config.el`)
  run(`sed -i '/;; .* ends here/d' config.el`)
  orgloc, elloc = @. parse(Int, first(split(read([`wc
    ↳ -l config.org`, `wc -l config.el`], String), '
    ↳ ')))
  blocks = parse(Int, replace(e.stderr,
    ↳ r"^[\s\S]*Tangled (\d+) code
    ↳ blocks[\s\S]*$"=>s"\1"))
  orgloc, elloc, blocks
end
```

Do it

```
loc = DataFrame(org=[0], el=[0], blocks=[0])
for hash in commits
  try
    push!(loc, organdelloc(hash))
  catch e
    println("$hash wasn't very tangleable")
  end
end
```

```
loc.ratio = @. 1 - (loc.el / loc.org)
```

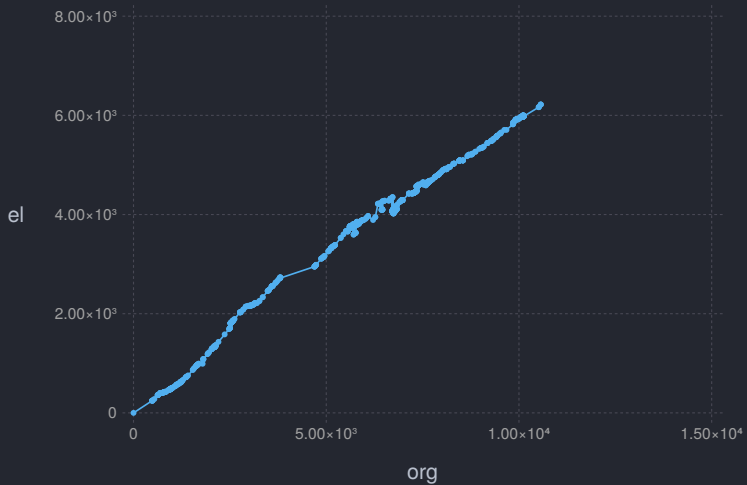

Wait...

How's the literacy

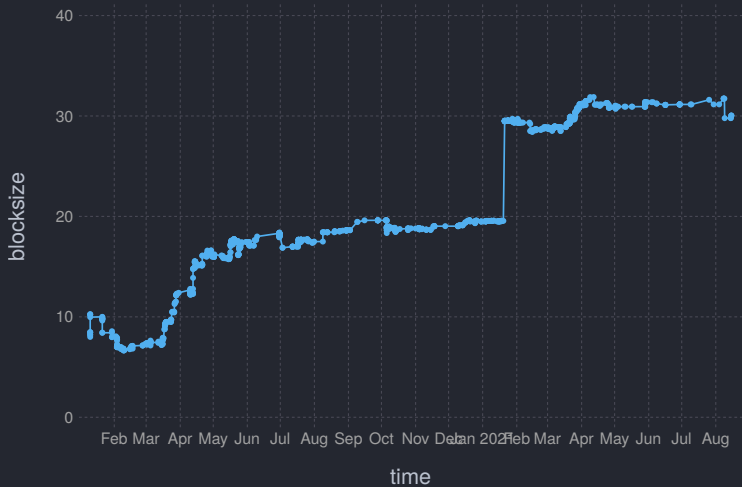

Is it based on size?

Code block size

```
loc.blocksize = loc.el ./ loc.blocks
```

Conclusion?

My config is becoming chonkier — bigger with bigger blocks

Surprise addition

A diversion into Julia

I bet you never saw that coming, did you? 😏
